1. Overview

1-1) Program Overview Title

→ Main title of the program

1-2) Program Overview Description

→ A short introduction explaining what this program covers and what students can expect to learn.

2. The topics include

Please provide 5 to 7 short bullet points about the main topics covered in this program.

Each point should briefly summarize the key areas students will learn, such as skills, methods, tools, or subject areas.

The topics include

2. The topics include

- ✓ UX research and user-centered design process
- ✓ UX design methods and problem-solving frameworks
- ✓ Wireframing, prototyping, and UI design with Figma
- ✓ Usability testing and design iteration
- ✓ Portfolio development and team projects
- ✓ Current AI and digital design tools

3. Learning Objectives

Please provide 5 to 7 short bullet points about what students will be able to do by the end of the program.

*Please keep this as one integrated list for the overall program.

The Certificate and Diploma course details will be explained separately in the Courses tab.

Learning Objectives

3. Learning Objectives

- ✓ Understand core UX/UI theories and practical design methods
- ✓ Apply research, ideation, and prototyping skills to real projects
- ✓ Create portfolio-ready UX/UI design deliverables
- ✓ Prepare for entry-level UX/UI design roles with hands-on project experience

4. Tools You'll Learn & Use

Please provide the tools, platforms, or software that students will learn or use during the academic courses.

For each item, please include:

- Tool name
- A short description of how students use it

Tools You'll Learn & Use

Tools You'll Learn & Use

Figma

UI design & prototyping

Framer

No-code websites

Miro

Ideation & workshops

Notion

Planning & documentation

Jira

Agile workflows

Claude

AI design support

5. Academic Curriculum

Please provide the **course list** for this program.

For each course, please include **a short description** and **“What you will learn” bullet points**.

The website format is already set, so it would be helpful if the content follows this structure as closely as possible.

Multi Platform UI Design

Term 2

4 weeks

This course covers UI design principles for multiple platforms including mobile, tablet, and desktop. Students will learn to design responsive and adaptive interfaces that provide a consistent experience across different devices and screen sizes.

What you will learn

✓

Designing for mobile, tablet, and desktop platforms

✓

Creating responsive and adaptive layouts

✓

Following platform-specific design guidelines (iOS, Android, Web)

✓

Building scalable and reusable design systems

Academic Curriculum

Certificate (6 months)

Diploma (12 months)

Introduction to Design

Term 1

4 weeks

Description

The course's objective is to help the student acquire foundation knowledge for the upper-level design courses. It introduces the graphic design principles to the students and covers topics such as form, typography, type styles, color theory and their applications in user interface and user experience design.

What you will learn

✓

Understanding the foundations of graphic design

✓

Applying design principles: form, typography, color and layout

✓

Using industry-standard software and creative tools

✓

Building a strong foundation for UI and UX design

what you will learn

Course list

6. Evaluation

Please provide the evaluation criteria for this program, including the minimum passing grade and grade breakdown by assessment type.

Evaluation

A minimum grade of 70% on the final course project and an overall grade of 70% are required to successfully pass the course.

75% : Course Projects

15% : Lab and group activities

10% : Attendance and Participation

Evaluation

7. Career Paths

Please provide potential job titles or career paths students may prepare for after completing this program.

The roles should be related to the skills covered in the academic courses.

8. Salary Range

Please provide typical salary ranges in Canada for related roles, grouped by career level.

Please include Entry level, Intermediate level, and Senior level. If students can prepare for multiple roles, use the most representative related job category. Please include the source if available.

Salary Range in Canada

Typical salary range

Entry level

Intermediate level

Senior level

CAD \$68K–\$99K / yr

Salary varies by role, location, experience, and employer.

\$55K – \$70K /yr

\$68K – \$99K /yr

Salary Range \$95K – \$120K+ /yr
